IC-1789

This is in response to your letter of September 1, 1987 regarding corrections to the Toxic Substances Control Act (TSCA) Chemical Substances Inventory.

The Agency has reviewed your Form C's 34424929, 34424937, 34424945, 34424952 and 34424960 and will include these substances derived from waxy corn starch in the TSCA Inventory as amylopectin derivatives. We are forwarding the forms to our contractor, Chemical Abstracts Service (CAS) for processing. We anticipate processing to take approximately six to eight weeks. New CAS Registry Number will be assigned to these five products. If you wish to know the CAS Registry Number assigned to your products, please contact the Agency at that time by writing to the address given in the letter.

The Agency has also determined that those products which were listed as "starch, derivatives" during the initial reporting period for the TSCA Inventory will continue to be listed as such. In other words, the CAS Registry Numbers originally assigned to the products derived from starch remain unchanged.

The Agency can also accept Form C No. 34424911 for correction for the substance reported in the [REDACTED]

[REDACTED] A new CA Index Name as well as a new CAS Registry Number will be assigned to this substance. If you wish to know the new CAS Registry Number, please contact the Agency at that time by writing to the address given below. As a result of the correction, the Agency is currently considering [REDACTED] as a candidate for Inventory deletion.
